(57) **ABSTRACT**

A dual-aperture zoom camera comprising a Wide camera with a respective Wide lens and a Tele camera with a respective Tele lens, the Wide and Tele cameras mounted directly on a single printed circuit board, wherein the Wide and Tele lenses have respective effective focal lengths EFL_W and EFL_T and respective total track lengths TTL_W and TTL_T and wherein $TTL_W/EFL_W > 1.1$ and $TTL_T/EFL_T < 1.0$. Optionally, the dual-aperture zoom camera may further comprise an optical OIS controller configured to provide a compensation lens movement according to a user-defined zoom factor (ZF) and a camera tilt (CT) through $LMV = CT * EFL_{ZF}$, where EFL_{ZF} is a zoom-factor dependent effective focal length.
